

## Attendance Tracker

Improving punctuality and time management for employers and employees alike

## About Attendance Tracker

The Attendance Tracker is a real time Employee Attendance Register system developed by Green Enterprise Solutions. The attendance tracker system allows attendance to be checked both on premise (fingerprint scanners, access cards) or at a remote location (mobile device). Remote check-ins are done via the mobile application, and are verified by use of GPS coordinates with a 10m radius accuracy.

The Attendance Tracker Portal includes features such as analytics for various levels, user management (roles and privileges, etc.), department management, locations management, visit verification and flagging, and several other features to keep tracking of attendance as fluid and hassle-free as possible.

## BYOD

Employees can use their personal device to check in at remote location, check calendar, view log history, add out-of-office days, view basic analytics, view and edit profile image and change password
